

PROFESSIONAL SUMMARY

Computer Science Engineering student at Shivajirao Kadam Institute of Technology & Management with a strong interest in MLOps, LLMOps, and AI Engineering. I enjoy building end-to-end machine learning systems, from data preprocessing and model training to deployment and monitoring. Through personal and hackathon projects, I have worked with Python, FastAPI, Docker, Kubernetes, AWS, MLflow, DVC, LangChain, and LangGraph to build scalable AI applications and automated ML pipelines.

CERTIFICATION

- Data Science in Python – Aligarh Muslim University AMU (2025)
- Mastering Deep Learning – IIM Bombay (2026)
- Google Data Capstone – Google (2026)
- Deep Learning for Visual Computing – IIT Kharagpur (2026)

SKILLS

MLOps / Data Science

- | | | |
|---|--|---|
| <ul style="list-style-type: none">• Scikit-learn• Tensorflow• DVC | <ul style="list-style-type: none">• Prometheus/Grafana• FastAPI• AWS | <ul style="list-style-type: none">• Docker/Kubernetes• Git/Github• MLflow |
|---|--|---|

LLM

- | | |
|--|--|
| <ul style="list-style-type: none">• LangChain• LangGraph• Transformers | <ul style="list-style-type: none">• RAG• Agents |
|--|--|

PROJECTS

AI Video Assistant :

- Tech Stack: Python, LangChain, LangGraph, Tools, FastAPI, LLM, RAG, Vector Databases
- Engineered a multi-modal RAG video assistant using LangChain and Qdrant, optimizing transcript context retrieval and cutting query latency by 35% across 50+ video transcripts.
- Implemented multi-agent orchestrations using LangGraph and LangChain to handle custom tool execution and complex multi-step user queries.

Capstone Project : Sentiment Analysis

- Tech Stack: Python, Scikit-learn, MLflow, DVC, Kubernetes, AWS, Docker, Prometheus/Grafana, Github Actions, CI/CD
- Architected a full-lifecycle Machine Learning pipeline featuring end-to-end data preprocessing, model training, evaluation, and experiment tracking via MLflow & DVC.
- Automated end-to-end ML deployment on AWS EKS using Docker and Kubernetes, setting up Prometheus/Grafana monitoring to track model latency and uptime..

Student 360 Hackathon Project :

- Tech Stack: Python, FastAPI, Scikit-learn, LangChain, Docker, Git
- Built an integrated analytics & management platform delivering 360-degree student performance metrics and AI-driven personalized insights.
- Designed modular FastAPI endpoints backed by ML evaluation models.

WORK EXPERIENCE / ACHIEVEMENTS

.exe | Team Lead & Software Engineer

- RLed a 4-person engineering team in agile sprints, orchestrating Git-based version control, system architecture, and code reviews across 3 hackathon projects
- Managed project architecture, code reviews, and Git-based collaborative development workflows to ensure high code quality.
- Managed ML operations and AI architectures.
- Placed #1 in "Python Challenge" held at college premises.
